

CSC's Software benefits CP Consultants - Singapore

▶ Dome Project using S-Frame™

CP Consultants – Singapore

Christopher Pang established his Singapore and Malaysia Companies in 1998, after gaining ten years' experience working for leading consultants in Singapore.

Christopher's philosophy is to maximise the use of software in order to increase his productivity, whilst maintaining a small team of committed staff, dedicated to civil and structural consultancy services.

Chris uses the full range of CSC's software including Orion as his primary, building modelling/analysis/design package – complemented by S-Frame™, TEDDS® and Fastrak. Major projects include multi-storey service apartments, resort condominiums with club houses, swimming pools and roof gardens together with basement car parking. Conventional housing developments of terraces, semi and detached homes are also included in the Company's expertise.

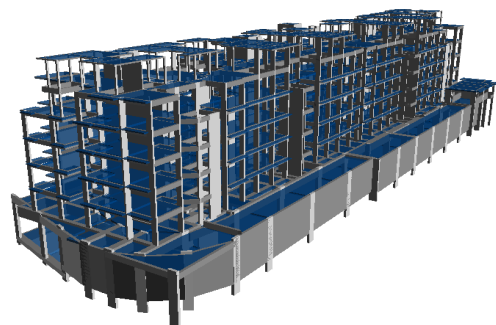

The immense design experience of Chris Pang, the Company's Principal, ensures cost saving and value engineering for various types of structural projects undertaken by the team.

"I am able to couple my practical design experience with the latest technology from CSC and consequently maximise the benefit to my clients. We can provide our clients with the highest value engineering services, whilst meeting the demanding timescales of multiple projects".

Major benefits of CSC's software to CP Consultants

- ▶ From one central RC building model, we can generate all the necessary analysis design and drafting in a fraction of the time we took using more traditional, non-integrated software tools.
- ▶ S-Frame™ provides us with powerful analysis features, coupled with an easy to use interface, and efficient post-processing through CSC's linked design software.
- ▶ TEDDS® electronic calculations save us money and time from increased productivity, reduced errors and improved presentation. The calcs are fully documented, Code-referenced and easy to check.
- ▶ We believe that Fastrak is the most comprehensive, steel building design solution available in the world market.
- ▶ All of CSC's products are complemented by quality consultancy, technical support and training courses.
