

TEDDS® Software Training benefits Horganlynch

▶ Croke Park Stadium, Dublin

Horganlynch Consulting Engineers

<http://www.horganlynch.ie>

Founded in 1970 – Horganlynch is a multi-disciplinary Practice, carrying out significant work in the fields of civil and structural engineering for both the State and private sectors.

Working from their Offices in Cork and Dublin –

Horganlynch have designed many of the more complex structural projects in the country, including the Glucksman Gallery in Cork, New East Hall in Cork and the 82,000 capacity Croke Park Stadium in Dublin, where state of the art software was used to aid the design process.

Current projects include the new Postgraduate Library at UCC; The West Cork Castle Hotel and the UCG Sports Centre.

The Practice has chosen CSC's TEDDS® as their preferred solution for organising their design calculations electronically. They save time, reduce errors and produce consistently professional calculations. The importance of training is recognised by the Practice and staff progress is continually monitored and assessed. As a result, all staff are encouraged to attend CPD and software-related courses, as required.

“Since we introduced CSC TEDDS® to the Practice a few years ago, productivity has improved significantly. The quality of presentation of calculations facilitated by the software is a significant plus factor. Our Engineers were taught to write their own calculations as well as being introduced to the existing library items including analysis, data tables, standard sketches and formula.”

▶ Peter Anthony – Managing Partner

“TEDDS® software is fast, efficient and very user friendly. The powerful, built-in tools introduced during Training enable us to work swiftly and present results in a professional, consistent format.”

▶ Kevin Callaghan & Brian Twomey – Senior Design Engineers

Major benefits of Software Training to Horganlynch

- ▶ Better utilisation of all of the features of the software
- ▶ Exposure to external design practice demonstrated during training
- ▶ Enhances confidence with regard to particular software usage and limitations
- ▶ Improves productivity as knowledge of system shortcuts is developed
- ▶ Firm business relationships established between our users and CSC's Support Team
- ▶ Enables CSC to respond to our needs, developing helpful features and customising if required
- ▶ Enables us to plan a software purchase plan by being made aware of other CSC products, which benefit our business
